

**REXNORD**

*Mining*

We keep mining moving.

# We don't simply understand mining equipment. We understand your business.

Thousands of  
mining operations,  
extracting every kind  
of material, rely on  
Rexnord every day.

It's not about gear boxes and bearings, or the countless other products that Rexnord brings to market. It's about our history supporting mining operations around the world for more than a century. And that's where experience comes in to play—experience that many in this industry can only imagine having decades from now.

That experience leads to highly specialized product solutions, crafted by engineers who listen to what the marketplace wants, and recognize what it needs as well. We take these collective experiences out of the office and put them back into every project on which we partner. And that ensures you're never buying a discrete group of products, but rather solutions that fit your system, and efficiently and reliably drive your process.

**At work at this very moment are tens of thousands of highly engineered gear box assemblies.**

## You won't just find Rexnord

Few organizations have the breadth of product solutions backed by industry knowledge that Rexnord supplies. Nor the installed base that proves it. Take for example the quiet workhorses that keep processes moving at precise speeds—the gear box. Tens of thousands of different gear box configurations are at work right now managing

around your facility. You'll find us everywhere.

power and speed in mining operations of every type. Our couplings are the critical link, where power from the motor transfers to these gear boxes to reliably drive the operation. Our bearings keep our customers' systems rolling, and rugged engineered chain keeps material moving. And in situations where it makes sense to remanufacture

rather than replace, Falk Renew® restores gear boxes to original OEM quality specifications—regardless of the brand. At Rexnord, we deliver what you need to meet production and budgetary requirements with products that are as tough as the operations they need to keep running.

# Our goal? Keeping your process moving.

More than 2000 Rexnord  
distribution partners stand  
ready to deliver the  
product you need.

There's only one real measurement in the mining industry: how many tons came out of the ground today, what got loaded, and what got shipped. That's what drives us, too. At the end of the day it's not about the products themselves that matter. It's what they—and we at Rexnord—ultimately did for the success of your business. Our sales, technical and support professionals—working closely with more than 2000 local distribution partners—have been in every corner of facilities just like yours, above and below ground. These people design solutions that move raw materials through every stage of the mining process, take residual materials out of the way, and pump wastewater for processing. Understanding how your system is

built and works translates into that golden concept called uptime. We'd be honored to learn about your process and your facility. More important, we'd like to share the knowledge we've acquired to help you run your mining business even smarter.
