Rexnord Industries, LLC Announces New Adapter Mount Roller Bearing

Rexnord Industries, LLC is proud to introduce the newest addition to its bearing product family – the Rexnord® 6000 Series SHÜRLOK™ Adapter Mount Roller Bearing.

The innovative 6000 Series SHÜRLOK adapter mount roller bearing increases an operation's efficiency and profitability by reducing installation errors, maintenance costs, and downtime. Studies indicate an 80% savings potential versus some competitive bearings. The 6000 Series' rugged and adaptable design make it ideal for mining, aggregate production, forest products, air handling, steel mills, and other demanding applications. An industry leading two-year warranty comes standard!

Available in all Rexnord® housing types for shaft sizes from 1-15/16 inches to 4-15/16 inches, the Rexnord SHÜRLOK adapter mount roller bearing takes the mystery out of mounting. The proprietary Spyglass™ Optical Strain Sensor (OSS) provides an easy-to-read indicator to determine optimal shaft grip – a common installation error.

The SHÜRLOK adapter mount roller bearing also incorporates a Positive Locking System that allows vibration free operation. Vibration is a leading cause for premature bearing failure. The tapered sleeve design provides easy installation and removal of the bearing. Its greatest advantage over competition is the ability to utilize undersized shafting.

A quick release feature allows easy and non-destructive removal of the bearing for maintenance, plus the mounting collar with Spyglass™ OSS Technology can be reused.

The Rexnord® 6000 Series SHÜRLOK Adapter Mount Roller Bearing also utilizes super-finished raceways that provide a cool running, quiet, high speed and high load capacity bearing. Best-in-class tolerance machined Hour Glass Roller elements provide longer bearing life. The self aligning spherical roller bearing provides up to three degrees of static and dynamic misalignment. With many housing options and the addition of auxiliary end caps and three field interchangeable seal options, the 6000 Series can be customized to each unique application.

About Rexnord:

Headquartered in Milwaukee, Wisconsin, Rexnord is a leading, diversified multi-platform industrial company comprised of two key platforms; Power Transmission and Water Management with approximately 7,100 employees worldwide. Rexnord power transmission products include gears, couplings, industrial bearings, flattop, aerospace bearings and seals, industrial chain, and special components. Rexnord's water management products are sold primarily under the Zurn and Wilkins brand names and products include specification drainage, water control, PEX and commercial brass. Additional information about the company can be found at www.rexnord.com and www.zurn.com.
