DuraHinge® Safety EDGE is the poultry industry's solution to safety and sanitation best practices. As a new and improved model of DuraHinge®, it is a fully secured edge that allows for tight transfers in the plant. Each end loop sweeps back around to the adjacent end loop to prevent catching while maintaining enough openness for easy splicing. The belt's outside loop dimensions match industry standards allowing it to be a universal fit for all conveyors.

DuraHinge® Safety EDGE - Durable by Design, Secure for Safety
