

## Built cooler to last longer

The difference in lasting drive performance comes down to the one that runs cooler than the competition. The Falk V-Class™ gear drive features a proven thermal system technology and a superior oil delivery design that keep it functioning cooler at a higher level longer than the rest. For any type of application, no matter how extreme the conditions, end users can rely on the Falk V-Class drive to get the job done when they need it most.

### Delivering results.

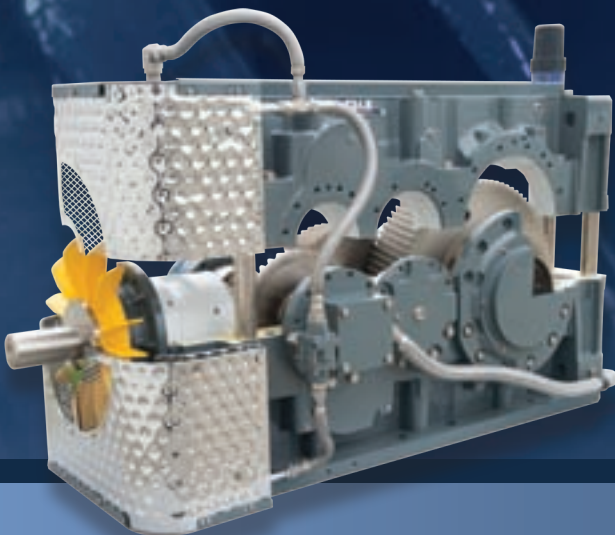

When the industry demanded a cooler drive, we did our research and real-life simulation testing to deliver the most powerful, best thermal-rated drive on the market. Our solution: the Falk V-Class drive.

- **Runs cooler** – No matter how harsh the environment, the advanced cooling system keeps the Falk V-Class drive running cooler longer. The optional DuraPlate™ patent-pending cooling system means your drive will never need coolant, pressurized air, water or electricity, in return saving you cost and downtime.

- **Performance day after day** – Computational Fluid Dynamics (CFD) engineering provides optimal thermal dissipation for continued reliability.
- **“Lowering” the standard** – With a sump temperature 20° F cooler than the AGMA standard, the Falk V-Class drive typically doubles the service life of lubricants.
- **Designed to be cool** – Cooling fins on the housing reduce oil temperature, shaft-driven fans lower overall drive temperature and proprietary oil feed passages improve lubrication to dramatically increase total drive operation life and minimize the need for maintenance.

Find out why the Falk V-Class drive is cooler. Contact CustomerCare at 866-Rexnord (866-739-6673) or go to the CustomerCare Locator on [www.rexnord.com](http://www.rexnord.com) for your local representative's contact information.
