

Setting the green standard

When a drive is the category leader in power, performance and reliability, it comes as no surprise that it also sets the green standard. The Falk V-Class™ gear drive requires no electricity, no water for cooling, consumes less oil, runs quieter and offers proven leak protection, making it just as eco-friendly as it is cost effective. And it's made from recyclable materials. Just one more reason, this drive delivers the difference.

Tough design. Easy on the environment.

The Falk V-Class drive's tough, high-performing design is engineered to withstand the harshest, most rigorous conditions with minimal impact to the environment.

- **Energy saving** – The optional DuraPlate™ patent-pending cooling system is a self-contained feature that eliminates the need for electricity and water to cool the drive, which equates to cost and resource savings.

- **Less oil consumption** – The Falk V-Class drive is designed to operate 20° F cooler than the AGMA standard, which typically doubles the service life of lubricants.
- **No leaks, no pollution** – Magnum seal with drainback technology lessens wear, keeps dirt and contaminants out, and prevents oil leaks, which can be harmful to the environment.
- **Quieter equals greener** – Quiet drive train reduces noise pollution, which in return decreases energy wasted and allows for a safer workplace.

Find out how the Falk V-Class drive is greener. Contact CustomerCare at 866-Rexnord (866-739-6673) or go to the CustomerCare Locator on www.rexnord.com for your local representative's contact information.
