

Enhance Your Rexnord Premium Service with Scannable QR Code-Based Functionality

Support your next scheduled maintenance with a single scan!

Being a Rexnord Premium Service customer means having full access to process and system upgrades that can save you time and money. Your package started with a full line survey. We now have the additional capability to tag all Rexnord products on your line with QR codes, creating instant part identification with a single scan.

How It Works:

At your operation's convenience, a Rexnord Application Engineering expert updates the Rexnord product inventory on your line, and tags them with QR codes. Your post-survey report is then provided and uploaded to the portal. The report includes an up-to-date condition assessment of each product on your line. With all products tagged, you're ready to scan any QR code and check the Rexnord Connect Portal for instant enhanced product information across your desktop and mobile device including:

- Catalog numbers
- Full product details
- Product images
- Robust support documentation

Your team can easily scan the QR code using a mobile phone and access the portal to find more information about any tagged asset on your line including:

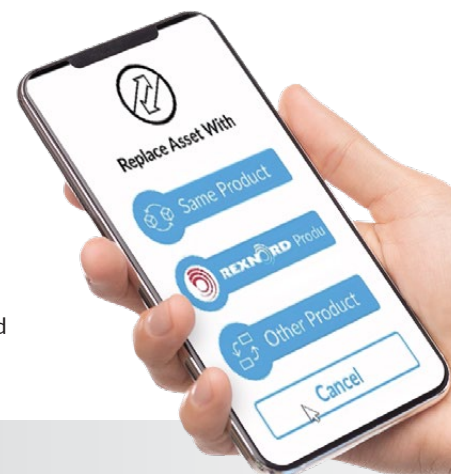

- Last service event details with option to add additional current details
- Chain elongation from our last premium service visit
- Real-time reporting supporting your next preventative maintenance with information on exactly what needs to be replaced and addressed
- Detailed report of full line including QR codes, SAP numbers, product details and product health that can be filtered to quickly get to the information you need the most

Benefits of updating your rexnord premium service:

- **Instant part identification with a single scan** – find out everything you need about a part including Rexnord SAP part numbers, internal part numbers, asset replacement quantities and chain elongation.
- **Access full product information easily** – product images, full product details and a robust library of support documentation including maintenance and installation materials are available in the customer portal when you upgrade.
- **Replace assets confidently from your mobile device or desktop** – replace parts with the same part or a different Rexnord product easily and track replacement cycles in the future.
- **Keep information top of mind** – data on the health of your line is available at your fingertips.
- **Make scheduled maintenance times more effective** – scan any services needed on your portal dashboard in order to support your next scheduled maintenance.

Scan to schedule a **Premium Service Upgrade** with a Rexnord specialist today!
