

HOW IT WORKS: Smart Condition Monitoring System

Powered by DiRXN[®] for Falk V-Class[®], A-Plus[®], and Y-Unit Gear Drives

- 1** Factory-installed, optimized sensors measure gear drive health parameters
- 2** Rexnord Edge Device collects sensor data and computes health condition
- 3** Andon light indicates gear drive health locally
- 4** Simple contextual health data can be communicated to a local display (optional add-on)
- 5** Alerts can be sent to the customer PLC or DCS system
- 6** The Rexnord Connect Portal provides customers with access to advanced analytics and remote monitoring of operating data for preventative maintenance and early anomaly detection
